

# Ticker Heat Map

Data as of June 29, 2020

The heat map is an excellent resource for new stock ideas based on the actual studies of the BetterInvesting community.

The heat map shows the top 100 tickers for which our members have created studies in the past 90 days.

The boxes' size indicates the number of times that users have created a study for a ticker relative to the number of studies created for other tickers.

The larger the box as compared to the other boxes, the more studies that have been created.

The color of the box ranks the company's general valuation sentiment based on the community's aggregated forecasts and the most current price. The color ranges from green to yellow to red. The greener the box means more potential for a favorable investment. The redder the box means less potential for a promising investment compared to the companies with green boxes.

As it is a ranking, every Ticker Heat Map has a range of colors from dark green to yellow to dark red.

**Note that the colors should not be used as buy/hold/sell indicators.**

**This feature is only available in the SSGPlus tool which is included in the Plus Membership.**
